## **Abstract**

The goal of the Student Result Management System is to automate the present manual system using computerised equipment and full-featured computer software to meet their needs, so that their vital data/information may be saved for a longer period of time with simple access and manipulation. The necessary software and hardware are readily available and simple to use.

As previously said, Student Result Management System may lead to an error-free, secure, dependable, and efficient management system. It might let the user focus on their other tasks rather than maintaining track of their records. As a result, the company will be able to make better use of its resources. The company can keep digital records without having to make duplicate entries. That implies you won't be distracted by irrelevant information while still being able to get to the information you need.

The goal is to automate its current manual method using computerised equipment and full-fledged computer software to meet their needs, so that their important data/information may be saved for a longer period of time with simple access and manipulation. Essentially, the project explains how to manage for high performance and improved customer services.

The "Student Result Management System" was created to address the flaws in the traditional practicing manual system. This software is designed to remove or, in some circumstances, mitigate the difficulties that this system now faces.

Furthermore, this system is designed to the company's specific requirements for smooth and efficient operations.

To eliminate data entry mistakes, the software is kept as simple as possible.

When inputting incorrect data, it also displays an error notice. The user does not require any formal expertise to utilise this system. As a result, it proves that it is user-friendly.

As previously said, a Student Result Management System may lead to an errorfree, secure, dependable, and rapid management system.

# Introduction

The "Student Result Management System" was created to address the flaws in the traditional practicing manual system. This software is designed to remove or, in some circumstances, mitigate the difficulties that this system now faces.

Furthermore, this system is designed to the company's specific requirements for smooth and efficient operations. To eliminate data entry mistakes, the software is kept as simple as possible. When inputting incorrect data, it also displays an error notice. The user does not require any formal expertise to utilise this system. As a result, it proves that it is user-friendly. As previously said, a Student Result Management System may lead to an error-free, secure, dependable, and rapid management system. It might let the user focus on their other tasks rather than maintaining track of their records. As a result, the organisation will be able to make better use of its resources.

Every organisation, big or little, faces difficulties in maintaining information about results, students, classes, subjects, and semesters. Because each Student Result Management System has unique student requirements, we create custom employee management systems that are adapted to your managerial demands. This is intended to aid strategic planning and guarantee that your organisation has the correct degree of knowledge and specifics for your long-term goals. Our systems also provide remote access options for those busy executives who are always on the road, allowing you to manage your staff at any time. These systems will ultimately allow you to better manage resources.

### **Literature Review**

The key objective of the Student Result Management System project is to manage the details of Student, Result, Subject, Class, Semester. It manages all the information about Student, Subject, Semester, Student. Because the project is entirely constructed at the administrative level, only the administrator has access. The goal of the project is to create an application software that will decrease the amount of time spent manually maintaining Student, Result, Subject. It keeps track of all the information about the Subject, Class, and Semester.

# Functionalities provided by Student Result Management System are as follows:

- Provides search capabilities based on a variety of criteria.
- Provides searching facilities based on a variety of criteria.
- Student Result Management System also manages Subject details online for Class details, Semester details, and Student.
- It keeps track of all the information about the result, subject, and class etc.
- Displays the information and description of the Student.
- Displays the information and description of the Student.
- To improve the efficiency of student management,
- It is in charge of keeping track of Class's data and transactions.
- Organize and manage student information. The ability to edit, add, and update records has increased, resulting in better resource management of student data.
- Manage your class's information

#### **Scope:**

It may help collecting perfect management in details. The collection will be evident, easy, and rational in a very short time. It also aids in the completion of all existing Student Result Management System projects. The cost of collecting the management will also be decreased, and the collection procedure will run smoothly.

Our project attempts to automate business procedures, which means we've attempted to computerise various processes of Student Result Management System.

# **System Requirements**

#### **Hardware Interfaces:**

• Processor: Dual-core CPU

• Hard Disk: 40GB

• RAM: 256MB or more

#### **Software Interfaces:**

Front end: HTML, CSS, JavaScript

- 1. HTML: HTML is used to create and save web documents. E.g. Notepad/Notepad++
- 2. CSS: (Cascading Style Sheets) Create attractive Layout
- 3. Bootstrap: responsive design mobile friendly site
- 4. JavaScript: it is a programming language, commonly used with web browsers.

Back end: PHP, MySQL(requires XAMPP server)

- 1. PHP: Hypertext Pre-processor (PHP) is a technology that allows software developers to create dynamically generated web pages, in HTML, XML, or other document types, as per client request. PHP is open-source software.
- 2. MySQL: MySQL is a database, widely used for accessing querying, updating, and managing data in databases.

#### **Admin Features:**

- 1. Admin Dashboard
- 2. Admin can add/update/ Class
- 3. Admin can add/update/ Subjects
- 4. Admin can add/update/ Active/Inactive Subject combination with class
- 5. Admin can register new student and also edit info of the student
- 6. admin can declare/edit the result of a student.
- 7. Admin can change own password

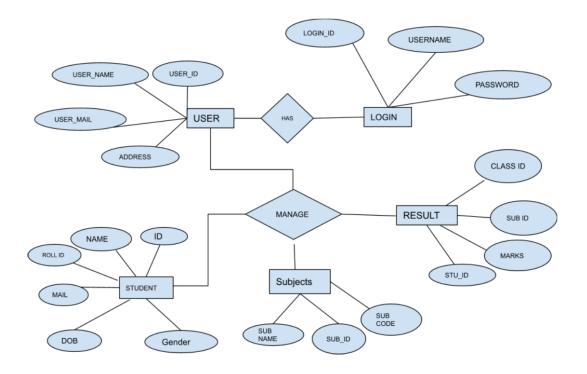

#### **Students Features:**

- 1. Students can search their result using a valid rollid.
- 2. Students can download the result in the PDF format.

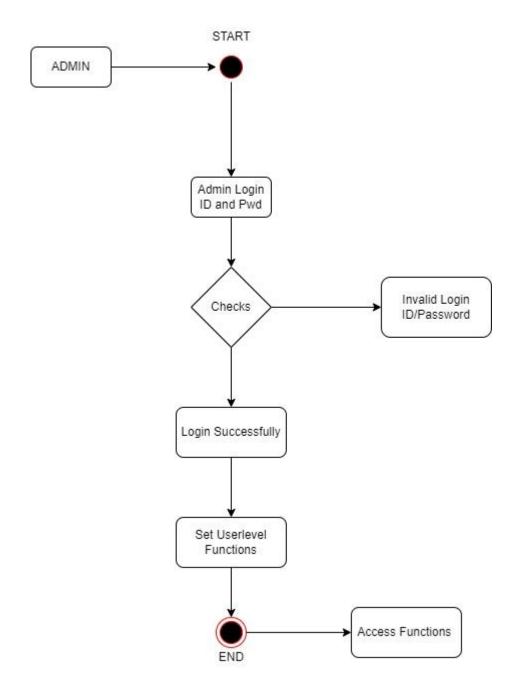

Login Credentials: Username – admin; Password: admin1234

### **End- Review:**

So in general, This website can be used by any institute or any teaching platform that needs to publish results in a way that is easily accessible by all the students, and easy to use for the admins. The main agenda is to maintain the digital records for the results of the exam without any manpower or manual book-entry system of the results issued. So, with the help of this website the pre-existing manual book record system of any result can be replaced with digital computerized equipment. This website is quite helpful for publishing the results online without any hassle.

# **Conclusion:**

From a proper analysis of positive points and constraints on the component, it can be safely concluded that the product is highly efficient. This application is working properly and meeting all user requirements.

By using this project manual book record management will be replaced so that all the data/information will be maintained perfectly. In the manual book-entry system there can be a possibility of losing the data because of any human errors, fire accidents, etc. But This website will store complete data in the server which can be retrieved through the internet from any computer. So, in conclusion this project allows the user to store the published results and the student's details. The implementation of the system will reduce data entry time and provide readily calculated reports in digital format.
